Department of Aerospace Engineering

Aerospace engineers are concerned with the application of scientific principles and engineering concepts and practices to design, build, test and operate aerospace systems. The curriculum is intended to provide students with a broad understanding of fundamental scientific and technological principles, and to develop the ability to use these principles in developing solutions to engineering problems.

The objectives of the aerospace engineering program are: (1) to help students develop written and oral communication skills and to acquire a knowledge of history, literature and society; (2) to provide students a solid foundation in and a sound working knowledge of basic engineering principles; (3) to help students obtain an understanding of the engineering principles and skills specifically needed in the aeronautical and astronautical disciplines; and (4) to assist and encourage each student to develop an enhanced ability to learn and think creatively.

Required courses cover aeronautical and astronautical subjects. Students may also choose to emphasize either aeronautical or astronautical systems. Technical electives allow concentration in such areas as aerodynamics, astronautics, flight dynamics and control, propulsion, structures, and structural dynamics. The design of aerospace components and systems is considered to be an integral part of the education of aerospace engineers. Hence, design is included throughout the curriculum, beginning with a sophomore course in aerospace fundamentals and culminating in the senior design course sequence. Students are required to apply their theoretical knowledge of aerodynamics, dynamics, structures and propulsion to solve open-ended problems and to produce portions of preliminary designs.

Department of Biosystems Engineering

Biosystems engineers ensure that we have the necessities of life: healthy food to eat, clean water to drink, renewable fuel and energy sources, and a healthy environment in which to live. The mission of the Department of Biosystems Engineering at Auburn University is to develop and disseminate engineering knowledge to solve problems in biological systems, natural resources, and the environment. It meets the resident instruction portion of that mission through the offering of a degree program which leads to a Bachelor of Biosystems Engineering, and another degree that leads to Bachelor of Science in Biological and Agricultural Technology Management. The four pathways to the BSEN degree program (biosystems engineering pathway, bioprocess engineering option, ecological engineering option, and forest engineering option), and the biological and agricultural technology management degree program are described below:

Biosystems Engineering

The Department of Biosystems Engineering offers the only accredited degree in biosystems engineering in Alabama. It is committed to preparing students for productive professional careers in the biosystems industries and related natural resource and environmental systems sectors.

The biosystems engineering program curriculum pathway is coordinated by the Samuel Ginn College of Engineering. Students should apply for admission to the Samuel Ginn College of Engineering and complete the pre-biosystems engineering program.

Bioprocess Engineering Option

The focus of the bioprocess engineering option is to produce engineers that seamlessly combine engineering and natural sciences to designing and developing systems, processes and equipment that convert biological and agricultural materials to value-added products such as food, nutraceuticals, polymers and pharmaceuticals. Bioprocess engineers provide a bridge between the research lab and the economic, large-scale implementation of technologies used to convert these biological materials to value-added products. The bioprocess engineering option is coordinated by the Samuel Ginn College of Engineering. Students should apply for admission to the Samuel Ginn College of Engineering and complete the bioprocess engineering option portion of the pre-biosystems engineering program.

Ecological Engineering Option

The Department of Biosystems Engineering offers an option in ecological engineering as part of the Bachelor of Biosystems Engineering degree. This option prepares students to solve environmental problems by applying engineering knowledge to natural ecological and biological systems. Ecological engineering combines basic and applied science from engineering, ecology, economics, and natural sciences to design, construct, and manage sustainable ecosystems that have value to both humans and the natural

environment. The ecological engineering option is coordinated by the Samuel Ginn College of Engineering. Students should apply for admission to the Samuel Ginn College of Engineering and complete the ecological engineering option portion of the pre-biosystems engineering program.

Forest Engineering Option

The Department of Biosystems Engineering (in conjunction with the Samuel Ginn College of Engineering and College of Forestry, Wildlife and Environment) offers an option in forest engineering as part of the Bachelor of Biosystems Engineering degree.

This forest engineering option involves preparing graduates to be able to apply of engineering principles and techniques for sustainable management and maintenance of trees, soil, water and other natural resources with the forest ecosystem. Forest engineering is therefore a hybrid of engineering, forest and management that is focused on efficient, cost-effective and environmentally friendly utilization of these resources. Therefore, this option prepares students for productive professional careers in the forest products industry and related natural resource and environmental systems sector.

The forest engineering option is coordinated by the Samuel Ginn College of Engineering and the College of Forestry, Wildlife and Environment, and is administered by the Department of Biosystems Engineering. Students can become registered foresters upon completion of a minor in forest resources. Beginning students should apply to the Samuel Ginn College of Engineering and complete the forest engineering option portion of the pre-biosystems engineering program. Students pursuing the forest engineering option must meet College of Forestry, Wildlife and Environment requirements for admission to the Forestry Summer Field Practicum.

Biological and Agricultural Technology Management

Students enrolled in the biological and agricultural technology management (BATM) major take a variety of courses in technology, science and management that will enable them to be practical problem solvers and be able to manage and develop solutions to the technological challenges of the increasingly complex agricultural and biological systems of the 21st century. The curriculum is also designed such that students can simultaneously obtain a minor in an area that is of interest to the student such as minor in agronomy and soils, stewardship-based agriculture, agribusiness, poultry science, information systems management, business analytics, technical and professional communication, or sustainability. The BATM curriculum is coordinated by the College of Agriculture.

Biosystem Engineering — Forest Engineering Option (FOEN)

The Department of Biosystems Engineering (in conjunction with the Samuel Ginn College of Engineering and College of Forestry, Wildlife and Environment) offers an option in forest engineering as part of the Bachelor of Biosystems Engineering degree.

The Forest Engineering Option involves preparing graduates to apply engineering principles and techniques for the sustainable management and maintenance of trees, soil, water, and other natural resources within the forest ecosystem. Forest engineering is therefore a hybrid of engineering and forest management that is focused on the efficient, cost-effective, and environmentally friendly utilization of these resources. Therefore, this option prepares students for productive professional careers in the forest products industry and related natural resource and environmental systems sector.

Students are admitted to the professional Biosystems Engineering with Forest Engineering Option curriculum (FOEN) upon successful completion of the Pre-Forest Engineering (PFOE) program in the Samuel Ginn College of Engineering. Additional details on the Forest Engineering Option are available on the Samuel Ginn College of Engineering Biosystem (https://bulletin.auburn.edu/undergraduate/samuelginncollegeofengineering/departmentofbiosystemsengineering/) page. Students pursuing the Forest Engineering Option must meet College of Forestry, Wildlife and Environment requirements for admission to the Forestry Summer Field Practicum and must attend the Forestry Practicum. This summer hands-on experience is scheduled for the summer term preceding the junior year and is held at the Solon Dixon Forestry Education Center near Andalusia, Alabama. Students should contact the College of Forestry, Wildlife and Environment Student Services Office at 334-844-1050 to notify your intent to apply to the Forestry Practicum.

Department of Chemical Engineering

Chemical engineers contribute to society through the useful application of knowledge and understanding of chemistry, physics, biology, and mathematics. Chemical engineers traditionally have participated in many decisions crucial to the preservation and improvement of society, including energy, fuel, commodity chemical and food production, resource management, and the design of necessary pollution control measures. Emerging new areas such as biotechnology, space technology, nanofabrication technology, semiconductor devices and modern construction materials also utilize the unique capabilities of the chemical engineer. Many technologies to improve public health depend significantly on chemical engineering such as biomaterials, biomedical devices, medical diagnostics, the chemical design and synthesis of drugs, the genetic engineering of therapeutic materials, drug delivery systems and medical imaging technology. Finally, chemical engineering plays an essential role in important environmental technologies such as atmospheric chemistry, product life cycle analysis, bioremediation, environmental risk and impact analysis, environmentally friendly manufacturing technology and products, separation and conversion technologies for waste reduction and the cleanup of contaminated sites.

The instructional mission of the department is to provide its chemical engineering graduates with the tools, skills and competencies necessary to understand and apply today’s technologies and, through life-long learning, successfully develop and employ tomorrow’s technologies.

The Program Educational Objectives and Student Outcomes can be found at the following URL: https://eng.auburn.edu/chen/academics/undergraduate/educational-outcomes.html

Because of their broad training and education, chemical engineers contribute to society in many functions, such as pure research, development, environmental protection, process design, plant operation and manufacturing, marketing, sales, and corporate or government administration.

The program is specially designed to assure all students have demonstrated capabilities in the core chemical engineering topics including material and energy balances, thermodynamics, chemical equilibria, heat, mass and momentum transfer, chemical reaction engineering, continuous and stagewise separation operations, process dynamics, statistics and control. The design experience is interwoven throughout the curriculum from elementary design principles in material and energy balances to the capstone senior process design and process control sequence employing advanced computer process and control simulators and experimental control systems.

The curriculum is specifically designed to enable graduates to model and design chemical and physical processes, design and conduct experiments, analyze and interpret chemical engineering data, and to determine capital and operating costs for chemical and physical processes. The curriculum prepares graduates to understand the need for professional integrity and ethical decision making in the practice of chemical engineering as well as providing an understanding of contemporary issues including business practices, environmental, health, and safety and other public interests. Students are also prepared for graduate study in chemical engineering, medicine, business and law.

Because of the breadth of chemical engineering opportunities, the department offers a number of specially designed program specializations that provide unique training and course selection to those students who wish to concentrate in a particular area or

technology. The current program specializations are biochemical engineering, biomedical engineering, computer-aided chemical engineering, environmental chemical engineering, pre-medicine specialization and pulp, paper and bio-resource engineering.

1 The AU Bulletin lists the University Core Curriculum requirements for students in the College of Engineering. Students must complete a sequence in either Literature or History. Because of the discipline-specific requirements for the Humanities courses, it is recommended that a History sequence be completed.

2 Breadth electives, technical electives, the science elective, and the senior design project must be selected from lists of approved courses available from the Department of Civil and Environmental Engineering. Each student must take a breadth elective in at least three of seven specialty areas: construction, environmental, geotechnical, pavements and materials, structural, transportation, and water resources engineering.

Department of Computer Science and Software Engineering

Software Engineering

The focus of the software engineering curriculum, which leads to the Bachelor of Software Engineering, is on software design and construction, requirements analysis, security, verification, and validation, as well as software engineering processes and tools appropriate for the development of complex software systems. The degree program prepares students for professional careers and graduate study with a balance of computer science theory and practical application of software engineering methodology. The curriculum is based on a strong core of computing topics and also enriches each student's general education with a range of courses from science, mathematics, the humanities and the social sciences. Through advanced elective courses, the curriculum allows students to specialize in core areas of computer science and software engineering. Engineering design theory and methodology, as they apply to software systems, form an integral part of the curriculum, beginning with the first course in computing and culminating with a comprehensive senior design project, which gives students the opportunity to work in one or more significant application domains. The curriculum also emphasizes oral and written communication skills, the importance of ethical behavior, and the need for continual, life-long learning. The overall educational objectives of the Software Engineering program are for graduates of the program to attain success in their chosen profession and/or post-undergraduate studies.

The undergraduate Software Engineering program is accredited by the Engineering Accreditation Commission of ABET (https://www.abet.org/).

Computer Science

The computer science curriculum, which leads to the bachelor of science in computer science degree, provides an excellent preparation for students seeking careers as software professionals and in computing-related fields, as well for those planning to pursue graduate study. The curriculum builds on a strong foundation in science, mathematics, social sciences, humanities and computer science with advanced course work in theoretical computer science, database systems, and computer networks. Course work ensures that students receive hands-on exposure to a variety of computer systems, tools and techniques. Elective courses allow students to specialize in areas of computer science such as cybersecurity, and artificial intelligence. The curriculum also emphasizes oral and written communication skills, the importance of ethical behavior, and the need for continual, lifelong learning. The overall educational objectives of the Computer Science program are for graduates of the program to attain success in their chosen profession and/or post-undergraduate studies.

The undergraduate Computer Science program is accredited by the Computing Accreditation Commission of ABET (https://www.abet.org/).

Computer Science (online)

The Bachelor of Computer Science (CPSC) program prepares students for careers as software professionals and in computing-related fields via an entirely online distance-education-based curriculum. The curriculum builds on a foundation of science, mathematics, social science, and humanities. It provides basic coursework in computer software development and theoretical foundations of computer science. This is followed by advanced coursework in computer systems, software engineering, and applications development, including web software design, database, and mobile applications development (such as smartphone and tablet software). The curriculum is rounded out by advanced electives in areas such as wireless and mobile networks, parallel computing, computer architecture, and formal languages.

The program can be completed in two ways: (1) as a second bachelor's degree, requiring only the 60 hours of **CPSC content** outlined in the curriculum model, or (2) as a first bachelor's degree, by completing the **other requirements** outlined in the curriculum model in addition to the CPSC content. These other requirements can be completed either by transfer credit or by completing the relevant Auburn University courses either online (if available) or on-campus. Courses from the CPSC curriculum cannot be transferred to any other graduate or undergraduate program in the Samuel Ginn College of Engineering. Likewise, courses from the on-campus Computer Science and Software Engineering department programs, such as Computer Science (CSCI) or Software Engineering (SENG), cannot be given transfer credit in the CPSC program. Students in the CPSC program do not have to take the pre-engineering required courses.

The CPSC content is delivered online in the form of recorded presentations, multimedia content, websites, programming exercises, quizzes and examinations, online discussions, and any other electronic means the instructor finds appropriate. The courses are offered in eight-week terms, with five terms per year. The start dates of the five terms are roughly: start of fall semester, middle of fall semester, start of spring semester, middle of spring semester, and during summer semester. Each 8-week course is worth 3 semester credit hours. Thus, taking two courses per 8-week term would correspond in workload to taking four courses on-campus during a regular semester. An 8-week online 3-credit-hour CPSC course will have the same academic workload as an on-campus 3-credit-hour course (roughly twice as many hours per week as a fall or spring semester course). Whereas an on-campus student is expected to complete an average of 3-3.5 hours of academic work per week over the length of a 15-week semester, a student in the CPSC degree program will be expected to complete an average of 6-7 hours of academic work per week over the length of an 8 week semester. Students are expected to watch all recorded content in a timely fashion, interact with the instructor and teaching assistants as needed via electronic means, and complete and submit all assignments electronically. A student must have access to a computer on which they can access the internet to view content, complete programming assignments, download and install needed software, and access remote resources such as virtual machines necessary to complete some programming projects and lab assignments.

Taking two courses per term, the CPSC content can be completed in ten 8-week terms, or two years. The coursework consists of eighteen required courses and two electives.

1 Courses for Core Science Sequence, Math Elective, and Technical Elective credit must be chosen in accordance with CSSE department policies and approved course listings. Students must consult with a CSSE Academic Advisor when selecting these courses.

The AU Bulletin lists the University Core Curriculum requirements for students in the College of Engineering.

Department of Electrical and Computer Engineering

The Electrical and Computer Engineering curricula produce well-educated graduates prepared to practice engineering at a professional level in an era of rapid and challenging technological development. The educational objectives of the Electrical Engineering curriculum include providing a foundation in seven fundamental areas of electrical engineering (circuits and systems, electromagnetics, electronics, digital systems, communications and signal processing, control systems, and power engineering), giving our graduates the technical proficiency needed for the professional practice of electrical engineering. The educational objectives of the Computer Engineering curriculum include providing a foundation in both electrical engineering (circuits and systems, electronics, and digital systems) and computer science, giving our graduates the technical proficiency needed for the professional practice of computer engineering, including the design and application of computer components and systems. Both curricula develop within our graduates the ability to communicate their ideas effectively to technical and non-technical audiences, work effectively in multidisciplinary teams, take their places in society as responsible citizens, and instill within them an appreciation of and enthusiasm for lifelong scientific inquiry, learning and creativity.

The goal of the professional portion of each curriculum is to emphasize basic areas of study while providing the flexibility to accommodate a diversity of interests and talents. To this end, each curriculum emphasizes knowledgeable use of digital computer systems, oral and written communication skills, the importance of business, economic, social and global forces on engineering, appreciation of the need to maintain the highest ethical standards, and the maintenance of professional competence through continued self-improvement after graduation. Each curriculum emphasizes engineering design and hands-on laboratory experience, culminating in a capstone design project. The senior year elective structure provides students with the flexibility to pursue a range of career options.

While the Electrical Engineering curriculum provides a foundation in seven fundamental areas, this foundation is very broad. The department offers several specially designed program specializations that provide unique training and course selection to those students who wish to concentrate in a particular area. The current program specializations are power engineering, pulp and paper engineering, and wireless engineering, with descriptions to follow. Students should discuss specialization details with the Electrical and Computer Engineering academic advisor.

Power Engineering Specialization

Pulp and Paper Engineering Specialization

This specialization provides students for careers in the pulp, paper, and bio-resource industries from the electric power perspective. These industries are uniquely capable of sustainable development with a renewable raw material base, recyclable products, and

processing technology able to achieve energy self-sufficiency and environmental compatibility. This specialization prepares students for a broad range of career paths in process engineering, product development, biotechnology and sustainable engineering.

Students in this specialization take Pulp and Paper Engineering Technical Electives (9 hours). These courses replace ENGR 2100 and the two ELEC Electives.

Wireless Engineering Specialization

This specialization provides students with the necessary preparation to pursue graduate work in wireless engineering or to transition to a career with emphasis on wireless network systems and/or communication devices.

Students in this specialization take Wireless Engineering Technical Electives (12 hours). These courses replace ENGR 2100, ENGR 2200, and the two ELEC Electives.

Department of Mechanical Engineering

The curriculum in Mechanical Engineering focuses on the analysis, design, manufacturing, and maintenance of mechanical components and systems. Emphasis is placed on the fundamental concepts of engineering science and design needed in a variety of industries, including automotive, aerospace, biotechnology, material and chemical processing, microsystems and sensors, nanotechnology, machinery and robotics, pharmaceutical, energy production and distribution, heating and refrigeration, food production and processing, entertainment, pulp and paper, weapons systems, and many others. Mechanical engineering students take courses in several areas of engineering including: mechanics of rigid and deformable solids, thermo-fluid sciences, energy systems, dynamic systems and controls, design and manufacturing, materials, and electronics.

In compliance with the Engineering Accreditation Commission (EAC) of ABET, the Department of Mechanical Engineering at Auburn University has developed and maintained a well-defined set of Program Educational Objectives to assure the quality of our program and graduates. These objectives are broad statements that describe the career and professional accomplishments that the mechanical engineering degree program is preparing the graduates to achieve a few years after graduation. The objectives are consistent with the needs and expectations of the program constituencies, and are reviewed and updated regularly using an annual assessment process. The current program educational objectives are:

- Our graduates have rewarding careers where they use their technical proficiency and mechanical engineering education for the professional practice of mechanical engineering or any other career path they choose.
- Our graduates contribute to their chosen field by effectively leveraging a broad array of professional skills such as oral and written communication, leadership, and teamwork.
- Our graduates are life-long learners through a variety of means including self study, continuing education courses, and graduate level education.
- Our graduates maintain awareness of a broad range of contemporary issues and global concerns especially as they relate to the field of mechanical engineering.

Students are able to concentrate on areas of special interest through technical elective courses taken in the senior year. In addition, specialized concentrations are offered in Additive Manufacturing, Automotive Engineering, and Pulp and Paper Engineering. Minors are offered in Tribology, Business-Engineering-Technology, Materials Engineering, Material Science, and Nuclear Generation Systems.

Materials Engineering

The curriculum in Materials Engineering (MATL) is structured to address problems associated with the design of materials and materials processes to meet specific needs for a variety of industries. Emphasis is on the basic sciences and principles of engineering with applications of these principles to materials behavior. The student must obtain a broad foundation in chemistry, physics and mathematics, which is applied in engineering courses. Within materials engineering courses, students obtain a foundation in the major areas of materials science and to the major classes of engineering materials, which is applied in courses in materials properties and selection, computational methods and in a capstone design course. Students gain in-depth experience in another engineering discipline through coordinated technical elective sequences. Students may design alternative cross-disciplinary sequences, but they must be coordinated and approved by the Materials Engineering Curriculum Committee. The objective of the MATL program is to produce graduates who are engaged in careers through which they apply materials engineering proficiency, effective communication and lifelong learning to provide technical, economic, or other benefits to society.

THE COLLEGE OF FORESTRY, WILDLIFE AND ENVIRONMENT (CFWE) has a long tradition of offering undergraduate and graduate programs that prepare students for employment in a wide variety of natural resources and environmentally focused professions. Our planet's diverse ecosystems, forests, and associated natural resources play a critical role in contemporary society. The sustainable management of those resources protects our health and quality of life, preserves the biological diversity of our environment, and contributes to our economy. The College's programs emphasize a comprehensive understanding of the interrelationships between the functions and values of our diverse renewable natural resources and environment. This awareness is essential to effective management and, ultimately, to meeting society's needs.

Curricula offered in the CFWE include environmental conservation and management, forestry, geospatial information science, parks and recreation management, sustainable packaging, wildlife ecology and management, wildlife enterprise management, and wildlife sciences pre-veterinarian medicine. The CFWE also provides courses required to attain a degree in forest engineering.

Within these disciplines, graduates can anticipate abundant employment opportunities within the public and private sectors, including positions within federal, state, and municipal agencies, consulting firms, and nonprofit organizations such as land trusts, conservancies, etc. Depending on a student's major, potential careers include conservation biologist, ecologist, ecosystem modeler, eco-tourism manager, environmental consultant, data and information specialist, forester, land and resource manager, operations manager, parks and recreation director, regulatory compliance officer, and supply chain manager.

In keeping with the University's land-grant mission, the College of Forestry, Wildlife and Environment pursues excellence in education, research, and extension (including outreach and public service activities) focused on forests, wildlife, and the associated natural resources and environment of Alabama and beyond. With respect to undergraduate education, this focus is on preparing graduates with the necessary skills for post-graduation employment, with the breadth and depth of educational background to support professional growth and continued career advancement. The result of this directed effort from an energized faculty and administration are motivated graduates who have the foundation to master the art and science of managing our natural resources and environment for the betterment of local and global communities.

Students are encouraged to visit the CFWE website (http://cfwe.auburn.edu/), which provides information on its programs and faculty, as well as updates on courses, scheduling, practicum details, and events of interest within the College.

If you would like to speak to someone about the programs in the College of Forestry, Wildlife and Environment, please call the director of student services at (334) 844-1050, the coordinator of student recruitment at (334) 844-1094 or send an email to workingwithnature@auburn.edu.

Transfer Requirements

Transfers from other institutions must apply through Enrollment Services. The exact placement of transfer students can be determined only upon review of their transcripts by the Registrar's Office and the College of Forestry, Wildlife and Environment.

Transfer credit for forestry and wildlife courses not considered equivalent to those required in the chosen curriculum may be substituted for elective credit. However, duplication of credit will not be allowed. Equivalency of College of Forestry, Wildlife and Environment courses will be determined by the Dean's Office.

Credit toward a degree in the College of Forestry, Wildlife and Environment will not be allowed for mathematics or chemistry courses at a lower level than those specified in the curriculum for the degree sought. Students who are not prepared to take the courses prescribed should take lower-level remedial courses without degree credit.

Pre-Veterinary Medicine

The Wildlife Science Pre-Veterinary curricula within the CFWE enables students to complete requirements for admission to colleges of veterinary medicine after a student's third year of undergraduate studies. If students are admitted to a college of veterinary medicine after the completion of their third year, they may obtain a Bachelor of Science degree in Wildlife Sciences Pre-Veterinary Medicine after successful completion of their first year in a college of veterinary medicine and completion of all major courses. The specific graduation requirements may be obtained from a program advisor or academic advisor for the CFWE. The minimum requirements for admission to most colleges of veterinary medicine are incorporated in the first three years of the options listed within the degree curricula. (See also the curriculum in Pre-Veterinary Medicine in the College of Science and Mathematics and College of Agriculture).

ESSI 7150 SCIENCE COMMUNICATION (3) LEC. 3. This course will provide opportunities for STEM graduate students to practice communicating science to multiple audiences. Students will gain skills by communicating with both stakeholders and the public and presenting information, exploring public opinion on socio-political topics such as climate change, resilience, and adaptation planning, and learning about appropriate framing and messaging techniques for target audiences. Guest speakers, reading discussions, practical tips, communication rubrics, and presentations to refine communication skills will be emphasized.

ESSI 7200 STEM STUDIO (2) LEC. 2. This course will provide opportunities for interdisciplinary STEM graduate students to learn about structured decision-making and the coproduction of science, which aims to undertake science that is actionable and useful to targeted stakeholder groups. Students will gain skills by communicating with stakeholders and develop a proposal to conduct research with a stakeholder group of their choice. Ideally, students would then implement their research in the follow-on Internship course (ESSI 7920) offered by the ESSI Program/NRT project. Guest speakers, reading discussions, written communication, workshops, and meetings with stakeholders will be included in the course. This course aims to: (i) expose students working on climate adaptation (from natural, social, or humanities sciences) to ideas of interdisciplinary climate knowledge, co-production, and structured decision-making; (ii) help students reflect on and relate these ideas to their own research - how their own climate research could connect with other disciplines and meet the decision needs of stakeholders; (iii) support participants in designing a climate adaptation research project for review by their peers and future implementation with their chosen stakeholder group.

ESSI 7300 SOCIAL-ECOLOGICAL-ENGINEERED SYSTEMS (3) LEC. 3. The purpose of this course is to present students with an approach to understanding adverse natural hazard impacts and disasters grounded in the analysis of disaster risk, vulnerability, and resilience. The course will use a multidisciplinary perspective to examine factors and conditions that put people differentially at risk before, during, and following a disaster event. The course will also introduce students to the metrics, methodologies, and tools necessary for both quantitative and qualitative resilience assessments and benchmarking methods. Specific topics that are an integral part of the resilience concept will include: climate-related hazard risk assessment; disaster resilience assessment covering ecological, social, economic, infrastructural, and institutional components; community capital; hazard mitigation and planning for fostering resilient communities; social vulnerability, and recovery. The course materials, lectures, and assignments will reflect the emerging emphasis on resilience to climate-induced natural hazards and disasters.

Environmental Conservation and Management (ENVC)

Sustainably managing for healthy, functioning ecosystems while improving human-well being requires skilled interdisciplinary leaders.

The Environmental Conservation and Management degree equips students to meet today’s conservation challenges by integrating ecological and social science with practical management skills. Our program prepares students to work across sectors—with communities, non-profits, government agencies, and private companies—to develop and implement conservation strategies that sustain ecosystems and enhance human wellbeing. With a strong emphasis on applied learning, students gain the knowledge and experience to lead in diverse contexts, whether their focus is wetlands, forestry, coastal resilience, biodiversity and protected areas, forest systems and working landscapes, or urban sustainability. Through a comprehensive blend of classroom instruction and field-based coursework, our graduates are prepared to make an impact.

Our Core Learning Objectives include:

- **Interdisciplinary Knowledge:** A foundation in ecological principles, environmental policy, and the human dimensions of conservation to understand and navigate complex environmental issues.
- **Applied Skills:** Training with multiple field methods, monitoring and evaluation, stakeholder engagement, and adaptive management—essential for planning and implementing effective conservation strategies.
- **Field Experience:** Opportunities for immersive, real-world learning through outdoor classrooms, field labs, and applied research projects across diverse landscapes and communities.
- **Collaborative Problem-Solving:** Exposure to collaborative frameworks and experiential learning that build communication, leadership, and team-based decision-making skills.
- **Career Readiness:** A strong bridge to careers in environmental consulting, land and water management, sustainability planning, nonprofit work, and public service through professional development and advisor mentorship.

The ENVC Major combines environmental, social science, and management coursework aligned with the program’s core learning objectives. To further tailor their academic training and prepare them for impactful professional careers, students complete a required minor that complements the interdisciplinary nature of the degree. Several minors have been designed specifically to complement the ENVC degree, including:

Forestry (FORB)

The Forestry (FORB) degree prepares students for employment in any aspect of forest resource management, from forest industry lands where timber production is typically the primary objective to private non-industrial properties where land is managed for multiple uses to public lands where recreation or environmental protection is often the priority. The curriculum emphasizes sustainable forestry management practices' biological, ecological, environmental, social, economic, and ethical considerations.

The objectives of the forestry curriculum are to provide students with:

1. Fundamental knowledge regarding the resources that professional foresters typically manage, their multiple uses, and their sustainable management and conservation.
2. A general education integrating physical, social, and biological sciences to prepare the forester for the role of steward of public and private forest resources.
3. Training and skills needed for initial forestry employment, as well as for advancement to higher levels of managerial responsibility.

Forestry majors attend a nine-week summer practicum course between their sophomore and junior years as a comprehensive introduction that provides hands-on learning and field skills necessary for their education and future careers.

Forestry-Specific Requirements

The Professional Curriculum in Forestry (FORB) begins the summer prior to a student's junior year. The Forestry Practicum is held at the Solon Dixon Forestry Education Center near Andalusia, Alabama, for nine weeks each summer. Pre-Forestry (PFOR) students apply to this curriculum once a year during spring semester. Students ready to begin Forestry Practicum will be sent a "Summer Practicum Application Link" in the month of January to apply to the Forestry Practicum for the upcoming summer. To be considered for admission, a student must have completed or be currently enrolled in all prerequisite coursework, which must include the following courses: ENGL 1100 and ENGL 1120, BIOL 1020 and BIOL 1021, BIOL 1030 and BIOL 1031, STAT 2510 and MATH 1130. Completion of CHEM 1030/CHEM 1031 and CHEM 1040/CHEM 1041 are highly recommended prior to the start date. All students accepted to the program must attend a required orientation the first Monday in April.

Attention Transfer Students

If this will be your first semester at Auburn — you must be accepted to the University first and indicate you plan to start in the summer term. After you receive your admission acceptance to Auburn, contact the College of Forestry, Wildlife and Environment Student Services Office at 334-844-1050 to notify your intent to apply to practicum. Student Services will then review your transcripts and send you the "Summer Practicum Application Link." All transfer students accepted to the program must attend a required orientation on the first Monday in April.

Accreditation

The major is accredited by the Society of American Foresters (SAF). Prior to graduation, students who have completed the degree meet the requirements to participate in the SAF examination to become Registered Foresters (RF). Graduates who have passed the exam are awarded RF status by the SAF upon two years of employment.

Parks and Recreation Management (PARK)

The Bachelor of Science in Parks and Recreation Management (PARK) degree prepares students with training in the design, management, and administration of programs for federal, state, or community parks and recreation areas or to work with non-profit or private industries operating sports, tourism, and recreation facilities. Within the nature-based Park and Recreation Management path, students learn to manage national, state, or private parks and recreation areas suitable for outdoor activities, including hiking, camping, kayaking, fishing, hunting, and mountain biking, to name a few. Or, depending on a student's career goals, they can tailor their major for Community Parks and Recreation Management careers focused on administering facilities and leading programs in areas such as city trails and parks, community recreation centers, playgrounds, aquatic centers, and other sporting facilities.

Coursework for the major includes a two-week experiential field course where students gather as a cohort to focus on outdoor skills development where they can earn several micro-credentials, including Leave No Trace, Certified Interpretive Guide, and Wilderness First Aid, among others. Before their senior year, students are prepared for and complete supervised internships as part of their degree requirements.

The major is designed based on standards set forth by the Council on Accreditation of Parks, Recreation, Tourism, and Related Professions (COAPRT). After one year of employment, students who have completed the degree meet the requirements to participate in the examination to become Certified Park and Recreation Professionals (CPRP) by the National Recreation and Park Association (NRPA).

The learning objectives of the program are to provide students with:

1. Entry-level knowledge about the nature and scope of park and recreation professions and their associated industries; the techniques and processes used by professionals and workers in these industries; and the foundations of the profession in history, science, and philosophy.
2. Ability to design, implement, and evaluate services that facilitate human experiences in parks and recreation that embrace personal and cultural dimensions of diversity.
3. Entry-level knowledge about operations, strategic management, and administration in parks and recreation.

Wildlife Ecology and Management (WLDE)

The Wildlife Ecology and Management (WLDE) degree program provides a broad biological education that is specifically designed to meet the needs of students interested in careers involving wildlife ecology, management, and conservation. Graduates are employed within state or federal wildlife agencies, environmental consulting firms, private conservation organizations, and private land management companies.

The learning objectives of the program are to provide students with:

1. Knowledge of wild animal biology, behavior, and ecology, including their interactions with other species and their environment.
2. Understanding the strategies and methods for conserving wildlife populations and habitats, including habitat loss, fragmentation, invasive species, and climate change.
3. Knowledge of techniques for managing wildlife populations, including population monitoring, habitat management, and population control methods.
4. Understanding the broader environmental context in which wildlife populations exist, including ecosystem dynamics, biodiversity conservation, and environmental policy.
5. Knowledge about human and wildlife interactions, including conflicts over resources, conservation ethics, and human impacts on wildlife.

Students are required to participate in a six-week wildlife summer practicum taken the summer before their senior year. In addition to required lab courses, the summer practicum experience enables students to acquire practical skills in field research methods, such as wildlife survey techniques, animal tracking, and data collection.

The major is designed to prepare students to meet the standards to apply for and successfully attain certification as Associate Wildlife Biologists (AWB) by The Wildlife Society (TWS) upon graduation.

Wildlife Enterprise Management (WLEM)

The Wildlife Enterprise Management (WLEM) degree is a cross-disciplinary program providing graduates with basic principles of wildlife management, hospitality services, and business to prepare them to lead wildlife-focused outdoor excursions and manage hunting and fishing lodges, ranches, corporate retreat facilities, and other consumptive use facilities.

Collaboratively taught by faculty in the College of Forestry, Wildlife and Environment and the Colleges of Business and Human Sciences, the curriculum will provide students with:

1. Understanding of wildlife management principles as they apply to consumptive use enterprises.
2. Understanding of the ecological principles that lie at the foundation of conservation biology and ecotourism.
3. Baseline customer service skills, food and beverage production, and lodging skillsets.
4. Ability to effectively market and advertise a wildlife or outdoor enterprise.
5. Exposure to legal issues related to the operation of wildlife and outdoor enterprises.

Graduates of the major will qualify for a Business Minor offered by the Harbert College of Business.

Wildlife Sciences — Pre-Veterinary Medicine (WLPV)

The Wildlife Sciences Pre-veterinary Medicine (WLPV) degree program prepares students with an interest in the outdoors and free-ranging wildlife populations with the necessary understanding of wildlife ecology, management, and conservation to be effective wildlife veterinarians. With this foundational knowledge students are prepared for veterinary school either at Auburn University or other institutions.

The learning objectives of the program are to provide students with:

1. Knowledge of wild animal biology, behavior, and ecology, including their interactions with other species and their environment.
2. Understanding the strategies and methods for conserving wildlife populations and habitats, including habitat loss, fragmentation, invasive species, and climate change.
3. Knowledge of techniques for managing wildlife populations, including population monitoring, habitat management, and population control methods.
4. Understanding the broader environmental context in which wildlife populations exist, including ecosystem dynamics, biodiversity conservation, and environmental policy.
5. Knowledge about human and wildlife interactions, including conflicts over resources, conservation ethics, and human impacts on wildlife.

In addition, students will receive: 1) Foundational coursework in biology, chemistry, physics, and mathematics required for admission to veterinary school; and 2) Additional coursework related to veterinary medicine, such as animal nutrition, pharmacology, pathology, and diagnostic techniques.

Students completing the first three years in the Wildlife Sciences, Pre-Veterinary Medicine Concentration meet the minimum requirements for admission to the College of Veterinary Medicine (CVM). Upon completion of the required curriculum, graduates may be admitted to the CVM prior to completion of the full four years. After completion of their freshman year in the CVM, students may obtain a Bachelor of Science in this concentration. All minimum requirements must be completed by the end of the spring semester preceding the date of admission to CVM. (See the College of Veterinary Medicine section for additional information.) Successful completion of the Doctor of Veterinary Medicine (DVM) degree qualifies graduates as veterinarians.

Tropical Conservation and Sustainable Development Minor

Tropical areas host more than two-thirds of the world's biodiversity. Complementing the incredible plants and wildlife is the diversity of agricultural, business, and other livelihoods that individuals design to make a living in these landscapes. Costa Rica has long been known as a leader in conservation and sustainability and is known as the birthplace of ecotourism. Costa Rica has over 25% of its land in parks and protected areas, the majority of its electricity comes from hydroelectric power, and it was one of the first countries to institute a program of payments for ecosystem services to incentivize private land conservation. Both small-scale and industrial coffee farming, dairy and cattle production, sugarcane, and fruit crops cover much of the remaining landscape. Ecotourism has become one of the primary earners of foreign exchange.

In this minor, students will learn about environmental conservation and sustainable agricultural production in Costa Rica. All courses will highlight issues of conservation and sustainability in tropical systems. After completion of the program, students will have a detailed understanding of the diversity of topics, methods, and approaches to the conservation of tropical natural systems and sustainable production systems.

Watershed Sciences Minor

Watershed science and management is an expanding field that involves managing the availability, quantity, and quality of water. Many major metropolitan areas and smaller cities rely on forested watersheds to purify the necessary drinking water for their populations. Many highly trained and dedicated professionals, knowledgeable in hydrology, climates, and water sciences, are needed in coming years to be certain this necessary commodity is provided to the United States and the world's growing populations.

Department of Consumer and Design Sciences

The Department of Consumer and Design Sciences focuses on consumers' interactions with their immediate and near environment. Three majors are offered: 1) apparel merchandising, design and production management, 2) interior design, and 3) philanthropy and nonprofit studies. These curricula focus on principles of consumer behavior and design, management, product development and marketing science, technology, and philanthropies and nonprofits. Majors in these curricula may lead to careers in business, design practices, and nonprofits that apply knowledge to developing, evaluating and offering consumer goods and services, interpreting consumers' wants and needs, informing and advising consumers and designing environmental spaces. A senior-level internship is required in all curricula. Accelerated BS/MS programs are available in AMDP and INDS. Please contact department for additional information.

Apparel Merchandising, Design and Production Management

Apparel Merchandising, Design and Production Management is a professional curriculum with two options leading to a B.S.: 1) Apparel Merchandising (APME) and 2) Product Design and Production Management (APDP). Diversity within the major allows students to select such varied fields as apparel design, apparel production management, retail sales and/or management, apparel merchandising, retail buying, fashion journalism, and consumer-producer relations. A professionally supervised internship is required. The program is endorsed by the American Apparel and Footwear Association.

Academic Standards and Policies

To complete graduation requirements, students in both AMDP options must earn a grade of C or higher on all required courses in the major and in all CADS prerequisite courses for the major's required courses. These courses are indicated in bold print in the curriculum models.

Interior Design

Interior Design (INDS) is a four-year B.S program accredited by the Council for Interior Design Accreditation (CIDA). The curriculum focuses on the design of the near environment, the aesthetic and functional aspects of space planning, furnishings and materials, lighting and mechanical equipment, and the integration of these aspects of the built environment to fit the needs of the user. A

professionally supervised internship is required. Student work from courses in the major may be retained by the program for accreditation and exhibit purposes.

Academic Standards and Policies

Freshman and transfer students admitted to Auburn University, as well as internal transfer students from within Auburn University, who desire to major in interior design, College of Human Sciences, will be admitted to pre-interior design (INDX). The pre-interior design students must complete the first year of pre-interior design course work, i.e., CADS 1000 and CADS 1100 with a grade of "C" or better in order to be evaluated for possible admission into the interior design curriculum. Admission into the interior design program (sophomore-senior levels) is limited to a class size of 40 students per year. Admission is based on a portfolio review by the interior design faculty of the work completed in the pre-interior design course work. Most course work in the major must be taken in sequence; transfer students should anticipate that additional semesters of study may be required to complete the program. To complete graduation requirements, INDS students must earn a grade of C or higher on all required courses in the major and in all CADS prerequisite courses before being allowed to proceed to the next course in the sequence. These courses are indicated in bold print in the curriculum model.

Philanthropy and Nonprofit Studies

The B. S. in Philanthropy and Nonprofit Studies will address the growing need to educate the next generation of philanthropic and nonprofit leaders. The nonprofit sector is steadily expanding. There is an increasing need for highly prepared professionals to lead nonprofits and promote philanthropic goals. As government programs and funding evolve in scope and size, there is a heightening demand for efficient and effective nonprofit organizations to enable and promote an expanding range of philanthropic activities that benefit local, regional, national, and international populations. Our society increasingly depends on nonprofits because the impacts of philanthropic acts address crucial societal needs.

Both individuals' and families' full implementation of philanthropic goals is enabled through financial planning. A significant component of the philanthropy and nonprofit studies major is the incorporation of personal financial planning that builds philanthropic goals into the plan. This component contributes to individuals' quality of life and to potential careers advising individuals in their planning or directly raising funds for nonprofits. Through the B.S. in PNPS, students will blend coursework with experiential learning through a practicum and internship. Additionally, students' awareness of and involvement in philanthropy will be built through guest lectures from nonprofit organizations.

Department of Human Development and Family Science

The Human Development and Family Science (HDFS) undergraduate curriculum is designed to prepare students for a variety of careers that contribute to the well-being of individuals and families across the life span. Career directions include, but are not limited to, teaching preschool-aged children, supporting children and families in a hospital setting, serving teens in residential treatment or church programs, aiding adult and/or elderly populations, implementing family education in the broader community, or advocating for family policy within government settings. Students also gain excellent preparation for graduate school. Majors select one of two options.

Options

- Early Child Development (p. 825)
- Child Life (p. 824)

The capstone course for students is the full-time undergraduate internship where classroom learning and real life come together to strengthen professional competence. The HDFS curriculum draws from the knowledge of many academic disciplines to promote understanding of current issues for individuals and families in modern society, and it is approved by the National Council on Family Relations to offer the Provisional Certified Family Life Education (CFLE) designation. The Department also operates the Auburn University Early Learning Center as well as the Harris Early Learning Center in Birmingham, Alabama. Both programs are accredited by the National Association for the Education of Young Children.

Fingerprint/Criminal Background Checks are required of all HDFS majors. Students who do not obtain the required background check and clearing letter will not be allowed to enroll in practicum, service learning, research, or internship courses.

Academic Standards and Policies: Students must earn a grade of "C" or better on all required HDFS major core classes at the 3000-level or higher to complete graduation requirements.

Child Life (HDCH) is a four-year B.S. program endorsed by the Association of Child Life Professionals (ACLP). The curriculum focuses on child development, understanding the impact hospitalization has on children and families, coping support, diagnosis education, procedure preparation, bereavement support, family advocacy and normalization of the hospital environment. A clinically supervised internship under the direct supervision of a certified child life specialist is required.

Academic Standards and Policies: Students admitted to Auburn University who desire to major in HDFS Child Life will be admitted into Pre-Child Life (HCHX). Admission into the Child Life Program is based on GPA (minimum 3.3 GPA), a professional letter of recommendation from someone who has seen the students work with children, and 300 verified hours of experience with children. Applicants must have completed HDFS 1810, NTRI 2000, HDFS 2010 and HDFS 3010 with a grade of “B” or better and have earned 60 credit hours overall. Applications are accepted until May 15Th each year.

Graduation Requirements: Students must complete a 100+ hour child life practicum and 600+ hour child life internship under the supervision of a certified child life specialist. Child life specific courses are only offered in select semesters and are necessary for clinical eligibility. Transfer students should anticipate that additional semesters of study may be required to complete the program.

Global Studies in Human Sciences (GSHS)

For students in Global Studies in Human Sciences, the world is their classroom. Students explore issues such as hunger, community development, sustainability, health, education, and international affairs in pursuit of solutions to our world's greatest challenges. Using design-thinking methodologies, students learn critical thinking and practical problem-solving skills to improve quality of life in communities around the world. Students also choose from a variety of relevant minors such as business, public health, and hunger studies to narrow their focus and apply lessons learned to various career fields.

The Global Studies curriculum prioritizes hands on experience through study abroad, a full time, semester-long internship, and a client-based capstone experience. Students gain vital professional skills including teamwork, cross-cultural communication, and professional writing in order to work effectively in their chosen field after graduation, whether they choose to focus their efforts locally or abroad.

Graduates of this interdisciplinary program leave Auburn University prepared to step into roles with multinational companies, philanthropic foundations, governmental and non-governmental organizations, and local non-profits. Students may also pursue graduate study in many fields ranging from public health and social entrepreneurship to law school and medical school. Regardless of their next steps, students leave empowered to enact practical, positive change in the world.

Certificate in Health Equity Science

The undergraduate Certificate in Health Equity Science (CHES) is administered through the Department of Human Development and Family Science in the College of Human Sciences. Students completing this certificate program will have a strong understanding of the role of social context in generating disease risks and disparities in health between groups. Students will also learn how this corpus of knowledge can be translated into health-promoting policies and community-level interventions.

The CHES requires 12 semester hours (including at least 6 semester hours at the 3000-level or higher). Completion of this certificate will appear on the official Auburn University transcript. Students earn the certificate by completing:

2 Thesis, practicum, and internship activities are not required for the certificate but are an alternative way to complete the elective credit requirements. In departments where such opportunities are available, thesis, practicum, and internship should be organized by the student with a faculty mentor in their department. To obtain approval for these credits to count towards the Health Equity Science certificate submit the following materials to ches@auburn.edu. Students should submit a 1 page description of the time commitment and primary activities of the internship or practicum (signed by the student and her/his supervisor) and a 1 page description of how the activities are relevant to health equity science topics. Students completing thesis credits to meet the certificate requirements should submit their thesis proposal for preliminary approval before it is completed and the completed thesis for final approval.
General questions about how to obtain the certificate should be directed ches@auburn.edu

Department of Nutritional Sciences

The Department offers the major in Nutrition. The NTRI major offers three study options: Nutrition/Dietetics (NTDI), Nutrition Science (NSPM) and Nutrition/Wellness (NTWE).

Nutrition

The field of nutrition is concerned with human physiology and biochemistry and their relationship to human health, diet, and well-being. The NTRI curriculum has three options which permit specialization according to students' specific interests. Course work in the major

must be taken in sequence. On and off campus transfer students should anticipate that additional semesters of study may be required to complete the program.

Nutrition Science Option

The Nutrition Science option prepares students for a variety of health professional schools, such as medical, dental, pharmacy, optometry, physical therapy, and physician's assistant, as well as for graduate study in the nutrition discipline.

Pre-Pharmacy

The pre-pharmacy program in particular permits students to take only three years of undergraduate classes before starting the Pharm.D. program at the Harrison College of Pharmacy. During their junior year, students will begin the application process for pharmacy school. After successful completion of four semesters in the Harrison College of Pharmacy's Pharm.D. program, the College of Human Sciences will approve conferral of a student's Bachelor of Science in Nutrition/Nutrition Science.

Pre-Anesthesiologist Assistant

The Auburn University/Edward Via College of Osteopathic Medicine-Bluefield Rocovich Early Admission Program (REAP) is a unique opportunity for Auburn University students interested in a career as an Anesthesiologist Assistant (CAA). The Rocovich EAP provides early admission to VCOM-Bluefield's Master of Health Science in Anesthesia (MHSA) Program for highly competitive Auburn students each year who have met the program requirements. Candidates selected for admission into the program are notified in the spring of their junior undergraduate year.

All interested Nutrition Science students should confer with the College of Human Sciences advisors for specific course requirements and other details about the program. After successful completion of the first year in MHSA, these students will be awarded their Bachelor of Science in Nutrition Science degree.

Students enrolled in the Nutrition Science option must earn a grade of "C" or better in all NTRI courses to graduate. Additionally, students must earn a grade of "C" or better in all pre-requisite courses to enroll in the subsequent NTRI course.

Nutrition/Dietetics Option

The Nutrition/Dietetics option is designed to prepare students interested in completing the requirements to become credentialed as a Registered Dietitian (RD) and Registered Dietitian Nutritionist (RDN). This option prepares students for careers in clinical nutrition, community nutrition, public health, nutrition education and counseling, foodservice management, and food and nutrition in industry. Graduates who successfully complete the Didactic Program in Dietetics are qualified to apply for a post-baccalaureate supervised-practice program, which is a requirement for eligibility to take the National Registration Examination for Dietitians and earn the RD/RDN credential. The Auburn University's Didactic Program in Dietetics is accredited by the Accreditation Council for Education in Nutrition and Dietetics of the Academy of Nutrition and Dietetics, 120 South Riverside Plaza, Suite 2000, Chicago, IL 60606-6995, (312) 899-0040 ext. 5400. https://www.eatright.org/.

Academic Standards and Policies: Freshmen and on and off campus transfer students who desire to major in Nutrition/Dietetics will be admitted to Pre-dietetics (NTDX). To be eligible for consideration for admission to the didactic program in dietetics, applicants must successfully complete at least 45 semester hours of the pre-dietetics curriculum courses, including:

Code	Title	Hours
NTRI 2000/2007	Nutrition And Health	3

As well as 4 of the following 6 science courses:

Code	Title	Hours
CHEM 1030/1031	Fundamentals Chemistry I	3
CHEM 1040/1041	Fundamental Chemistry II	3
CHEM 2030	Survey Of Organic Chemistry	3
BIOL 1020/1021	Principles Of Biology	3
BIOL 2500/2501	Human Anatomy and Physiology I	3
BIOL 2510/2511	Human Anatomy and Physiology 2	3

Students must successfully complete the lower-division pre-dietetics prerequisite courses as outlined below with a minimum GPA of 2.8 on a 4.0 scale. No grade lower than a "C" will be accepted in any prerequisite course (BIOL 1020/BIOL 1021, BIOL 2500, BIOL 2510, CADS 2000 CHEM 1030/CHEM 1031, CHEM 1040/CHEM 1041, CHEM 2030, HDFS 2000, NTRI 2000 (or NTRI 2007), NTRI 2070,

PSYC 2010). Criteria for admission include pre-dietetics cumulative GPA, science GPA, and student's personal statements and career goals. Due to the limited number of seats, achievement of minimum standards does not ensure admission into the Didactic Program in Dietetics.

Program Application: Pre-dietetic students must formally apply to the DPD, upon completion of the admission requirement course work. Once grades are posted for the semester, students will complete the application located on the Nutrition Dietetics website and follow application instructions to submit.

Students enrolled in the Pre-Dietetics and Nutrition/Dietetics options must earn a grade of "C" or better in all NTRI courses to graduate. Additionally, students must earn a grade of "C" or better in all pre-requisite courses to enroll in the subsequent NTRI course.

Students admitted to Pre-dietetics are required to apply to be admitted into the Nutrition/Dietetics option, which is also the accredited Didactic Program in Dietetics (DPD). Students must successfully complete at least 45 semester hours of the pre-dietetics curriculum courses (NTRI 2000 (or NTRI 2007), and at least 4 of the 6 required science courses, including CHEM 1030/CHEM 1031, CHEM 1040/CHEM 1041, CHEM 2030, BIOL 1020/BIOL 1021, BIOL 2500/BIOL 2501, BIOL 2510/BIOL 2511) with a grade of "C" or better and a minimum GPA of 2.8 on a 4.0 scale.

Nutrition/Wellness Option

The Nutrition/Wellness option prepares students for careers in health-related settings. Graduates find positions in non-profit health organizations, hospital-based and corporate-based programs, and federal, state and local health agencies.

Students enrolled in the Nutrition/Wellness must earn a grade of "C" or better in all NTRI courses to graduate. Additionally, students must earn a grade of "C" or better in all pre-requisite courses to enroll in the subsequent NTRI course.

Nutrition — Nutrition/Dietetics Option (NTDI)

Freshmen and on and off campus transfer students who desire to major in Nutrition/Dietetics will be admitted to Pre-dietetics (NTDX). To be eligible for consideration for admission to the didactic program in dietetics, applicants must successfully complete at least 45 semester hours of the pre-dietetics curriculum courses, including:

Code	Title	Hours
NTRI 2000/2007	Nutrition And Health	3
As well as 4 of the following 6 science courses:		
CHEM 1030/1031	Fundamentals Chemistry I	
CHEM 1040/1041	Fundamental Chemistry II	
CHEM 2030	Survey of Organic Chemistry	
BIOL 1020/1021	Principles of Biology	

BIOL 2500/2501	Human Anatomy and Physiology I
BIOL 2510/2511	Human Anatomy and Physiology II

Students must successfully complete the lower-division pre-dietetics prerequisite courses as outlined below with a minimum GPA of 2.8 on a 4.0 scale. No grade lower than a “C” will be accepted in any prerequisite course (BIOL 1020/BIOL 1021, BIOL 2500, BIOL 2510, CADS 2000, CHEM 1030/CHEM 1031, CHEM 1040/CHEM 1041, CHEM 2030, HDFS 2000, NTRI 2000 (or NTRI 2007), NTRI 2070, PSYC 2010). Criteria for admission include pre-dietetics cumulative GPA, science GPA, and student’s personal statements and career goals. Due to the limited number of seats, achievement of minimum standards does not ensure admission into the Didactic Program in Dietetics.

Pre-dietetic students must formally apply to the DPD, upon completion of the admission requirement course work. Once grades are posted for the semester, students will complete the application located on the Nutrition Dietetics website and follow application instructions to submit.

College of Liberal Arts

JASON HICKS, Dean
CYNTHIA BOWLING, Associate Dean for Research and Faculty Development
CHARLES A. ISRAEL, Associate Dean for Academic Affairs
LAURA PLEXICO, Associate Dean for Engagement and Graduate Studies
MELISSA ADAMS, Assistant Dean for Student Services

Majors in Liberal Arts prepare students for immediate employment after receiving undergraduate degrees, for example, as journalists, public relations experts, archivists, interpreter/translators, curators, social scientists, counselors, fine arts and entertainment industry professionals, education support specialists, management professionals, or technical communicators. Students also receive strong academic backgrounds for graduate study or professional education. The College of Liberal Arts consists of four academic areas, each of which is divided further into departments.

- Humanities: English, History, Philosophy, and World Languages, Literatures, and Cultures, awarding Bachelor of Arts degrees.
- Fine Arts: Art, Music, and Theatre and Dance, awarding Bachelor of Arts, Bachelor of Music, and Bachelor of Fine Arts degrees.
- Communication: Communication and Journalism, and Speech, Language, and Hearing Sciences, awarding Bachelor of Arts and Bachelor of Science degrees.
- Behavioral and Social Sciences: Aviation, Economics, Political Science, Psychological Sciences, and Sociology, Anthropology, and Social Work, awarding Bachelor of Arts and Bachelor of Science degrees.

Becoming a Liberal Arts Major

Entering a Major: Incoming freshmen and external transfer students are admitted directly to the College of Liberal Arts. The following majors have additional admission requirements beyond university admission: Art-BFA, Aviation-Professional Flight, Communication, Health Services Administration, Journalism, Music, Public Relations, Film and Media Studies, Social Work, and Theatre-BFA. Students should contact the department that houses their intended major to determine specific entrance requirements.

Declaring a Major: All students must declare a major by the end of the semester in which they complete 65 semester hours of credit, including transfer and other college credit. Students transferring into the College of Liberal Arts with 65 or more semester hours of credit must declare a major upon admission. If a major is not declared at the time of admission, students will follow the requirements for the College of Liberal Arts and will be identified as pre-majors in a curriculum or by the designation UNLA for undeclared students.

Required Courses for All Liberal Arts Majors

Most majors in the College of Liberal Arts require students to complete a one-year sequence in a world language other than English. Students are placed into each sequence based on results of a placement exam administered by the Department of World Languages, Literatures, and Cultures. Students in Aviation and those pursuing BFA degrees in Art and Theatre are exempted from the language sequence requirement. Most majors in the College of Liberal Arts also require students to complete LBAR 2010: Liberal Arts Careers Preparation; majors not requiring that class have identified other specific places in their curricula addressing career preparation for students.

Policies for Concurrent Degrees and Double Majors

To earn a second baccalaureate degree, students must complete a separate body of knowledge appropriate for the degree. The Dean's Office in the College of Liberal Arts determines when it is possible for students to earn a second baccalaureate degree. Auburn University academic policy stipulates the minimum hours necessary in addition to the primary degree or curriculum. The College of Liberal Arts requires that, at a minimum, 30 additional hours of non-overlapping course work must be accomplished in the second baccalaureate degree program.

To earn a double major, students must complete all the major courses in both majors. Of these major courses, at least 20 hours of each major must be unique, rather than being used as major, support, or core courses in both majors. If at least 20 hours of unique courses do not exist for each of the two majors, students cannot pursue a double major.

For complete information on concurrent degrees and double major requirements, please see the Academic Policies section.

Special Academic Opportunities

To augment the learning experiences available through majors in the College of Liberal Arts, students can take advantage of the following possibilities:

- *Concurrent Degrees with the College of Engineering*. Students can receive a degree from a Liberal Arts major and a degree from a major in the Samuel Ginn College of Engineering, including specially designed programs pairing engineering and modern language training. To ensure that all requirements are met, students should see advisors in both colleges. Typically, five to six academic years are necessary to complete concurrent degrees.
- *Pre-Law Study.* While students interested in preparing for advanced study of the law should consider the major in Law and Justice, most degrees in Liberal Arts are accepted by law schools as appropriate preparation for the study of law. However, students should consult with the pre-law advisor in Haley Center 7002 in preparing for law school admission and the study of law.
- *Pre-Health Study*. Most majors in Liberal Arts are accepted as preparation for professional degrees in health, including medicine, dentistry, optometry, physical therapy, and occupational therapy. Generally, students will need to take particular courses in science, mathematics, and philosophy as their university core requirements. They will also need to take additional courses in science and mathematics not required by most Liberal Arts majors and attend a Pre-Health Professional Orientation course offered during fall semester. To ensure they complete the necessary requirements and to get assistance in applying to graduate or professional programs in health fields, students should meet with the pre-health advisors in the College of Science and Mathematics. Students should also consult with advisors in the College of Liberal Arts.
- *Teacher Certification through the College of Education.* Students holding baccalaureate degrees in English, history, French, or Spanish may gain teaching certification through enrolling in the Alternative Master's Certification Program in the College of Education. Upon successful completion of the program, students are awarded a master's degree in education (MEd), and they will be eligible to apply for Alabama Class A certification (master's level certificate).
- *University Honors College.* Students with extraordinarily high academic aptitude can receive individual learning opportunities through the Honors College. For more information, see the "Academics Policies" section of this Bulletin.
- *Study Abroad.* Students can gain course credit either through class instruction or internship in Study Abroad programs. For more information, students can contact the Office of International Programs or consult the college's Study Abroad information at https://cla.auburn.edu/cla-abroad (https://nam11.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcla.auburn.edu%2Fcla-abroad&data=05%7C01%7Cblltn%40auburn.edu%7C72415c09752d4cc7186208db469658a4%7Cccb6deedbd294b388979d72780f62d3b%7C1%7C0%7C638181383796449746%7CUnknown%7CTWFpbGZsb3d8eyJWIjoiMC4wLjAwMDAiLCJQIjoiV2luMzIiLCJBTiI6Ik1haWwiLCJXVCI6Mn0%3D%7C3000%7C%7C%7C&sdata=3rP%2Bx%2F64GjpW5Zy35eyZ3xZx6bE1q9yeRX6xxugo05c%3D&reserved=0).
- *Cooperative Education Programs.* Students receive opportunities to integrate classroom education with work experience in Cooperative Education Programs. Students alternate each semester between attending classes and working for companies.

Cooperative Education Programs are available in the Departments of Art, English (Professional Writing and Public Writing track), Political Science (Health Services Administration and Public Administration majors), Psychology, and Sociology, Anthropology, and Social Work. Interested students should contact the director of the Cooperative Education Program.

- *The Caroline Marshall Draughon Center for the Arts and Humanities.* Students may be interested in the programs and other activities sponsored through the Caroline Marshall Draughon Center for the Arts and Humanities at Pebble Hill. The mission of the Center is to strengthen the bonds between the College of Liberal Arts and the public by creating and implementing arts and humanities programs that explore our individual and collective experiences, values, and identities through the past, in the present, and for the future. The Center also creates occasions and space for dialogue, intellectual community, and cross-disciplinary scholarship.

Department of Art and Art History

The Department of Art and Art History offers a relevant, rigorous, and purpose-driven education in studio art and art history and presents engaging programs and exhibitions that both stimulate an understanding of diverse forms of artistic expression and encourage cultural and intellectual awareness. The department provides a challenging and supportive atmosphere in which majors learn to conduct insightful and high-impact scholarship and creative research, and through outreach and professional

experience become competitive in diverse career paths. The Department of Art and Art History offers three majors: a Bachelor of Arts (formal option in art history), a Bachelor of Arts in Studio Art, and a Bachelor of Fine Arts in Studio Arts.

The **BA in Art (formal option in Art History)** offers students training in the global history of art, from the ancient period to the present, through a range of interpretive methods. Bolstered by internship opportunities and study abroad experiences, the curriculum requires a breadth of study across ancient and medieval, Renaissance and Baroque, modern and contemporary, and non-Western art. The degree prepares students for careers in museums, galleries, auction houses and other cultural institutions, as well as education, business, and law, and provides a foundation for graduate studies in the field.

The **BA in Studio Art** is ideal for students who are passionate about art making and who wish to take a breadth of courses across media, including animation, ceramics, drawing and painting, photography, printmaking, and sculpture. The flexibility of the BA degree curriculum enables students to take advantage of additional academic courses of study across the University and to combine the study of studio art with a major or minor in another field of study.

The **BFA in Studio Art** is a professionally oriented program that prepares students for graduate school and careers in the arts. BFA students concentrate in one of six areas: animation (pending NASAD [National Association of Schools of Art and Design] approval), ceramics, painting/drawing, photography, printmaking, or sculpture. Students may complement their focus with additional studio courses in digital arts or study abroad. BFA students must complete an advisory review during their sophomore year. The following are required for the review:

- Completion of 21 credit hours of studio art and art history courses (check with the department for a list of courses).
- Submission of a written statement of academic and career goals.
- Submission and presentation of a portfolio of artwork.
- Completion of an in-person review with a committee of designated Department of Art & Art History faculty.

The **Animation Minor** will give students a foundation in 2D and 3D animation in traditional and digital applications. Animation skills can complement a range of majors, such as advertising, business, computer science, graphic design, marketing, media studies, music production, and prepare students for careers in film, television, music video production, visual effects, and video games. Animation is also extensively used in a variety of other contexts, such as advertising, education, and medical and scientific fields.

The **Art History Minor** is ideal for students who wish to supplement their majors with the visually and intellectually stimulating study of art and visual culture. Minors develop numerous transferable skills including writing, research, critical thinking, visual analysis, and oral presentation. These skills are invaluable in professions as diverse as law, medicine, business, communication, and education, as well as design, cultural preservation, and museum and gallery work.

The **Photography Minor** will give students a foundation in creative photography, both analog and digital, in the context of fine art. Students majoring in advertising, business, communications, education, graphic design, journalism, marketing, media studies, public relations, and many medical and scientific fields will find that photography skills, and the related visual acuity cultivated in the photography minor, can be a major asset in their careers.

The **Studio Art Minor** is designed for students who want to enrich their major field of study with a competency in art making. A minor in studio art is valuable for any student seeking to develop innovative thinking and creative expression through a range of drawing, design, animation, ceramics, painting, photography, printmaking, and sculpture courses. Students pursuing fields as varied as engineering, communications, and marketing can benefit from instruction in creative thinking practices, and in critical and observational skills. Art coursework can better prepare students for advanced study in allied fields such as architecture, graphic design, environmental design, interior design, and industrial design. The range of art experiences offered in the studio minor fosters a lifelong appreciation and enjoyment of art.

A **Studio Art Lab/Materials Fee** will be assessed in all studio art courses (ARTS courses designated STU in the AU Bulletin) starting fall semester 2021. This fee, $100 for each STU-designated ARTS course, will partially defray the cost of materials supplied to students enrolled in studio courses, such as canvas, clay, glazes, photo chemicals, metals, and wood; and the maintenance and replacement of studio equipment, like cameras, enlargers, kilns, presses, and printers.

Curriculum in Professional Flight

Auburn University is a FAA-approved Part 141 pilot school. Flight operations are conducted at the Auburn University Regional Airport (KAUO), located less than three miles from campus.

The Professional Flight degree qualifies the graduate for the eventual attainment of the FAA Restricted Airline Transport Pilot (R-ATP) certification with as little as 1,000 hours of flying experience. Degree certifications and ratings include Private Pilot Certification, Instrument-Airplane Rating, Commercial Pilot Certification, and Multi-Engine Rating. Certificated Flight Instructor with Airplane Single-Engine rating (CFI), CFI with Instrument-Airplane rating (CFII), and CFI with Multi-Engine rating (MEI) courses are also available. Initial Commercial Pilot certification (AVMF 2261, AVMF 2271, and AVMF 4271) MUST be completed at Auburn. Ground and flight training for Private Pilot and Instrument Rating-Airplane completed at another FAA-approved Institution of Higher Learning (IHL) may be applied towards FAA R-ATP reduced hours eligibility. Students enrolled in flight training coursework at Auburn must register for and complete all current and subsequent AVMF courses at Auburn.

Additional Program Specifications for Professional Flight Curriculum

1. Advanced Placement credit may be granted only for Private Pilot and Instrument Rating Airplane certifications upon evidence of the FAA pilot certificate/rating held at the time of enrollment and upon satisfactory completion of applicable aeronautical knowledge and flight proficiency evaluations.
2. Initial Commercial Pilot certification (AVMF 2261, AVMF 2271, and AVMF 4271) MUST be completed at Auburn.

Admissions

Admission to the Professional Flight program is dependent on a student's type of application.

Admission Procedures for Freshmen

Admission to the Professional Flight degree program is a two-step process. Students must: 1) apply and be admitted to Auburn University as a Pre-Professional Flight student before the Professional Flight secondary application deadline, and 2) submit the secondary application and be admitted to the Professional Flight degree program. The Auburn University Admissions Office (https://www.auburn.edu/admissions/) determines eligibility for admission to the university. The secondary application will be evaluated on various academic, personal, and professional characteristics linked to success within the aviation industry.

Admission Procedures for External Transfer Students

Admission to the Professional Flight degree program is a two-step process. Students must: 1) apply and be admitted to Auburn University as a Pre-Professional Flight student before the Professional Flight secondary application deadline, and 2) submit the secondary application and be admitted to the Professional Flight degree program. The Auburn University Admissions Office (https://www.auburn.edu/admissions/) determines eligibility for admission to the university. The secondary application will be evaluated on various academic, personal, and professional characteristics linked to success within the aviation industry.

Additionally, external transfer students must hold a Private Pilot Certificate at the time of application to be considered for enrollment and have a 2.7 transfer GPA.

Admission Procedures for Internal Transfer Students (Major Changes)

Current Auburn University students must apply and be admitted to the Professional Flight degree program through a secondary application. A link to the application will be made available by the College of Liberal Arts. The secondary application will be evaluated on various academic, personal, and professional characteristics linked to success within the aviation industry.

Additionally, internal transfer students must hold a Private Pilot Certificate at the time of application and have a 2.7 Auburn GPA to be considered for enrollment.

Additional Requirement for Admitted Professional Flight Students

FAA 1st Class Medical Certificate: The Professional Flight curriculum is designed for students seeking a career as an Airline Transport Pilot, and to earn and maintain this rating an aviator must have this medical status. If a student is unable to achieve this certificate, they should not incur the time and expense of all preliminary ratings. A copy of the 1st class medical certificate will be collected by the School of Aviation before a student can begin flight training at Auburn.

Program Requirements

About Fight Fees

Flight lab courses have an associated flight fee established by the School of Aviation prior to the start of the academic year. Flight fees are allocated to cover aircraft, flight simulation, flight instructor, and FAA knowledge test fees. VA students are responsible for FAA certification test fees. Fuel prices are subject to change from term to term and any unexpected large changes in fuel prices may necessitate the addition of a fuel surcharge for all training airplane usage.

Flight course fee estimates are based on suggested lesson time allocations included in FAA-approved training course outlines for pilot/flight instructor certifications or ratings. The training hours and fees outlined in the Auburn University Bulletin are the minimum to complete a flight lab course. Because achieving FAA certification requires a demonstration of aeronautical knowledge and piloting proficiency, a student's actual course cost may vary and depend greatly on the student's ability, knowledge, motivation, and the preparation and dedication expended toward acquiring certification goals. Students requiring additional instruction will incur additional flight lab fees. Making flight training a priority contributes to minimizing the need for additional training and incurring additional flight fees.

Because of the importance of continuity in flight training and in maintaining piloting proficiency, the AU School of Aviation recommends Professional Flight students train consecutively from the start of their first semester through each succeeding semester, including summer semesters. If interruption in semester attendance is unavoidable, it is vitally important students continue to maintain their aeronautical knowledge and pilot proficiency to FAA standards for the certification held during that period not in attendance.

Flight Instruction Lab Structure

Students are required to submit their semester schedule to the Professional Flight Academic Advisor after the student has registered for all their academic courses. Flight instruction labs are assigned to students by the Professional Flight department who will then review student schedules and select which flight instruction lab time best suits the student's academic schedule and current point in flight training.

AU Flight instruction labs are typically offered in 2-hour increments on either (1) Monday, Wednesday, Friday or (2) Tuesday, Thursday, Saturday. These scheduled flight labs are structured to provide course completion by the end of the registered term.

Flight Instruction Lab Enrollment

Students may not enroll themselves in a flight instruction lab and may only be enrolled in a flight instruction lab by the Professional Flight Academic Advisor. Additionally, students may not enroll in the next sequential flight instruction lab until successful completion of the previous lab.

Flight students may only register and start a new flight instruction lab during what is referred to as an "on-ramp." On-ramps begin on the first day of a semester and continue on a weekly basis with the last one beginning no less than 30 days from the last day of the semester. Students will be notified of the last on-ramp date at the required Student Safety Meeting each semester.

If a student completes a flight instruction lab from a previously enrolled semester or during the current semester, the student may not begin the next flight lab during that semester, unless approved by the (1) Professional Flight Academic Advisor, (2) the Chief Flight Instructor, (3) and the Director, School of Aviation, and the next sequential flight instruction lab is added after the 15th class day (in the full semester), but prior to the Last Day to Withdraw date as published in the Auburn University Academic Calendar. (VA students may not be enrolled in flight courses prior to the last day to withdraw from the semester.)

If the enrollment is not approved or the student completes a flight instruction lab after the close of the last on-ramp for the semester, the student must wait until the next semester to begin and participate in their next flight lab.

Priority Enrollment

Per VA Regulations, Veterans receive Priority Registration. Additionally, both the flight instruction lab and student classification (Senior, Junior, Sophomore, Freshman) are taken into consideration when determining "priority" enrollment. Students who are registered in Certificated Flight Instructor (CFI) courses are next, following in sequential order down to students enrolled in Private Pilot courses.

Flight Instruction Lab Attendance

Attendance for flight instruction labs is mandatory. Unexcused absences, attending lessons unprepared, or repeated late-shows may result in monetary penalties, grade penalties, and can jeopardize a student's enrollment status in the AU Professional Flight program.

A Safety Meeting, held during the first 5 days of the start of each semester term, must be attended by all AU Professional Flight students. Since attendance is mandatory for students participating in flight instruction labs, a student will be considered to have "started" their respective flight instruction lab on the date the meeting is held; provided (1) the student attended the Safety Meeting and (2) is registered for a flight instruction lab that begins on the first day of the semester term.

Students who begin a flight instruction lab during one of the allowed sections built within the term are also required to begin the flight instruction lab within 5 days of the first day the section is offered. Since the Safety Meeting is held before the section's first day, attendance of the Safety Meeting does not count as starting the flight instruction lab. Student progression through Flight Instruction Labs is tracked through the Professional Flight department's flight training software. This software system not only indicates when a student is scheduled to begin a flight instruction lab but also shows a date/time stamp of each flight instruction lesson or lab.

Flight Instruction Lab Make-Up Policy

Flight Instruction labs may be canceled for reasons both in and out of a student's control. Reasons outside of a student's control include weather, aircraft maintenance, and flight instructor availability. If a student misses a scheduled flight lab for one of these reasons, the student is expected to contact their Flight Instructor by email prior to their next scheduled flight lab to determine how the canceled flight lab may be made up.

In some cases, students may know in advance they will be absent from an assigned flight instruction lab. In these situations, the student must submit a completed Absence Notification Form to the AU Professional Flight department in accordance with departmental policies. The Absence Notification Form will be reviewed and determined as excused or unexcused.

If a student does not notify the AU Professional Flight department that they will miss an assigned flight instruction lab, the student will be charged a no-show fee. If a student misses a scheduled flight instruction lab more than 3 times for non-approved reasons, the

student may be withdrawn from their current course. The student may also be reviewed for dismissal from the AU Professional Flight program.

Flight Instruction Lab Course Incompletes

Flight Instruction Labs are designed to be completed within a designated term. Student progression, however, is subject to both uncontrollable factors (weather, aircraft maintenance, and flight instructor availability) and controllable factors (student performance). To record a student's Standards of Progress, a grade is assigned at the completion of the term, regardless of if the student has successfully finished the course. A grade of "NR" (Not Recorded) is assigned to the course if the student has not completed the course by the end of the assigned term.

If the student has not completed the Flight Instruction Lab by the end of the registered term, they may continue flying for course completion. Allocated training hours and fees for each Flight Instruction Lab are based on the FAA-approved Training Course Outline (TCO). Students requiring additional instruction beyond those hours listed in the TCO will incur additional flight instruction lab fees that exceed the minimum required to complete the course. Once the student has completed the course, the AU Professional Flight department will follow Auburn University's Grade Change Policy, changing the "NR" grade to the applicable letter grade. Failure to complete the course in the following semester enrolled will result in additional action as described in the Student Progression Section.

Student Progression

Professional Flight students are expected to progress in the degree program within a reasonable amount of time. Progress is measured in terms of flight instruction lab completion, overall academic performance, and display of the moral character traits required in the FAA Airline Transport Pilot (ATP) certificate. The School of Aviation Professional Flight Review Board (PFRB) will convene as required to review the performance of students not progressing as expected and determine appropriate corrective action and continued participation in the program.

Progression Markers

Flight Lab Course Incompletion

Students that do not complete a flight lab within the semester the course is started will receive a grade of NR (Not Recorded) on the recommendation of their Assistant Chief Flight Instructor (AFCI) and the Chief Flight Instructor. Failure to complete the course in the following semester of enrollment will warrant evaluation by a student's AFCI, who will recommend a change of grade to IN (Incomplete) and continuation (reasonable progress being made) or IN with a documented training plan that addresses specific student performance issues. Failure to complete a training plan within a designated timeframe will be reviewed by the PFRB and may result in at grade of W (withdrawal) or F (failure) and possible dismissal from the program.

Institutional GPA

Students must earn a grade of at least C in all courses in the major and maintain a minimum 2.70 institutional GPA. The Professional Flight curriculum is designed for progressive development of flight knowledge and skills, and students who earn less than a C will not be allowed to progress to the next course. A course in which a student earns a grade less than a C may be repeated one-time only. Successful completion of the repeated course will result in the student being allowed to continue to progress through the Professional Flight degree curriculum. Students who earn a grade less than a C in two or more Professional Flight major courses or maintain an institutional GPA below 2.70, will be reviewed by the PFRB and may be dismissed from the program.

Good Moral Character

By U.S. federal regulation, high moral character is expected of a professional certified airline pilot. As such, these same attributes are expected of students within the Professional Flight program. Students that fail to demonstrate honesty, trustworthiness, reliability, and respect for the law may be considered for dismissal from the program. The PFRB will review and make a recommendation on all cases of a student's failure to uphold these traits, including Auburn University Academic Honesty Code or Student Code of Conduct sanctions.

Appeals Process

All PFRB results will be communicated to the student in writing. Students may submit an appeal of the board's decision to the Auburn University College of Liberal Arts. A separate committee will review all the information concerning a student's performance and issue a final decision after receiving the appeal. This committee's decision is final and will be communicated to the student in writing.

Federal VA Students in the Professional Flight Program

The Alabama State Approving Agency (SAA) and the Department of Veterans Affairs (VA) have approved Federal VA funding for Auburn University's Professional Flight and Aviation Management degree-programs. Under Chapter 33: Post 9/11 GI Bill®, the VA will cover the costs affiliated with Flight Instruction and required Ground School fees up to maximum reimbursement limits. Flight Instruction

fees include aircraft and flight simulation fees, flight instructor fees, and FAA aeronautical knowledge tests. VA students are responsible for any FAA aeronautical knowledge test fees.

Students utilizing Federal VA Education benefits must (1) ensure they are registered for a Flight Instruction Lab prior to flying and (2) they are cleared by the School of Aviation to begin flying. Courses started after the 5th day of the posted term will be prorated per VA Policy with the remaining amount being the financial responsibility of the student. Only degree-applicable courses will be certified to the VA by Auburn University's School Certifying Officials (SCO).

Per VA regulations, VA students may not be enrolled in multiple Flight Instruction Labs during the same registered term. If a student is enrolled in two or more flight instruction labs during the same registered term, the VA considers this as "Front Loading." Front loading violates VA regulations as the VA will only cover affiliated costs of one flight instruction lab per term.

If a student utilizing Federal VA education benefits fails to adhere to Auburn University and VA Policies and Regulations, the student may be financially responsible for **all** flight related charges. *NOTE: The VA will ONLY cover the published amount listed in the Auburn University Bulletin and will NOT pay for any overage amounts/fees such as additional training like Proficiency or Review flights. If a student accrues any additional fees past the amount approved by the SAA, the financial responsibility is on the student.*

Additional information regarding VA education benefits is available in the Auburn University Veterans Resource Center (VRC). Please contact them at (334) 844-8167, veterans@auburn.edu or online at veterans.auburn.edu (https://veterans.auburn.edu/).

Certificate in Aviation Hospitality Management

The holder of a Certificate in Aviation Hospitality Management will have a depth of knowledge and a more strategic view of the aviation industry. This enhanced professional competency will enable them to become effective company representatives and a preferred source to fill managerial positions directly interfacing with customers in the aviation industry.

The Certificate in Aviation Hospitality Management is administered through the School of Aviation in the College of Liberal Arts in collaboration with the Horst Schulze School of Hospitality Management in the College of Human Sciences. The program is intended for Aviation Management, Professional Flight, and Hospitality Management degree students, but is open to all students regularly enrolled in Auburn University.

The certificate requires 15 semester hours from the Aviation Management and Hospitality Management programs. Aviation and Hospitality program students use 6 semester hours from their core major curriculum and 9 hours from the collaborating program curriculum. Other students will take two required courses from each program and may choose between the two programs for the fifth course. Completion of this certificate will appear on the official Auburn University transcript. Students earn the certificate by completing the following:

Department of History

The curriculum in history at Auburn endeavors to teach students both knowledge of the past and skills in the research and communication of that knowledge. As such, the Bachelor of Arts in History can serve as a sound foundation for graduates to pursue a number of career options. Auburn graduates in History have gone on to a diverse range of careers that include public history and archives, historic preservation, secondary education, public administration, law, military service, politics, and a range of business careers. While some students go on to teach history in schools and a small number pursue graduate education in history, most graduates are spread through career paths representing the broad possibilities that come with a well-developed ability to ask clear questions, research the information and sources necessary to construct an answer, write factually and persuasively, and think historically.

Students should check with their academic advisor to declare a History major.

To graduate with the BA in History, students must meet these requirements:
